

Epic ID	Epic Name	Feature/Capability	User Story ID	User Story	User	Example Acceptance Criteria (Draft)	Response (a, b, c, d)	Response Comments
E1	Establish a single, structured starting point for project pricing	Project Classification	US-01	As a Project Delivery Lead (PDL), I want to initiate pricing from a project classified as a new project or renewal project so that the correct workflow is applied.	Project Delivery Lead (PDL)	Project is classified as New or Renewal at initiation; classification is visible in the project header and drives available inputs and comparisons.		
E1	Establish a single, structured starting point for project pricing	CRM/Project Context Load	US-02	As a PDL, I want key project context pre-populated at initiation so that I do not re-enter known information.	Project Delivery Lead (PDL)	Project header includes customer/account, service type(s), Business Unit, start date/work year, and related identifiers where available; governed fields are read-only. Depends on upstream project/opportunity context availability.		
E1	Establish a single, structured starting point for project pricing	Included Entities	US-03	As a PDL, I want to define included entities for a project so that scope and pricing rollups reflect the correct structure.	Project Delivery Lead (PDL)	User can add/remove included entities and see scope/pricing recalculated and rolled up by entity where applicable.		
E1	Establish a single, structured starting point for project pricing	Multi-Service Projects	US-04	As a PDL, I want to price multi-service projects so that a single project can include multiple service types.	Project Delivery Lead (PDL)	Multiple service types can be included; each service type supports its own scope items/assemblies/prompts and rolls up to a project total.		
E1	Establish a single, structured starting point for project pricing	Renewal Baseline Load	US-05	As a PDL, I want renewal projects to load prior-year baseline pricing so that changes are visible.	Project Delivery Lead (PDL)	When Renewal is selected, prior-year scope, hours, and fee totals are loaded where available and shown alongside current inputs.		
E1	Establish a single, structured starting point for project pricing	Project Variants / Arrangement	US-06	As a PDL, I want to select the project arrangement for pricing (e.g., services-only, services plus licensing, success fee) so that pricing inputs and calculations follow the correct structure.	Project Delivery Lead (PDL)	Arrangement selection is available where the BU supports it; selection controls which non-labor components are available and how totals roll up. Supports BU variability without enumerating all cases.		
E1	Establish a single, structured starting point for project pricing	Versioning / Revisions	US-07	As a PDL, I want to create a new version of a project pricing model so that revisions are traceable over time.	Project Delivery Lead (PDL)	User can create a new version; system retains prior versions, including who changed what and when; approvals are tied to a specific version.		
E2	Enable consistent and governed project scoping	Scope Item Catalog	US-08	As Pricing Operations, I want governed scope items so that scoping is consistent across projects and Business Units.	Pricing Operations	Scope items are selected from an approved catalog with stable identifiers; BU/service type filters determine which scope items are available.		
E2	Enable consistent and governed project scoping	Scope Item Selection	US-09	As a PDL, I want to add and remove scope items for a project so that the pricing model reflects the intended deliverables.	Project Delivery Lead (PDL)	User can add/remove scope items; changes immediately update assemblies, price items, and rollups.		
E2	Enable consistent and governed project scoping	Assemblies Expansion	US-10	As a PDL, I want assemblies to expand scope items into structured components so that common work is applied consistently.	Project Delivery Lead (PDL)	Selecting an assembly expands into predefined components (scope components/price items) with default quantities that can be recalculated by prompts.		
E2	Enable consistent and governed project scoping	Prompts & Answers	US-11	As a PDL, I want to answer prompts so that complexity and risk adjust scope quantities automatically.	Project Delivery Lead (PDL)	Prompts support defined answer types; answers apply multipliers/logic to quantities; answers are stored and retrigger calculations when changed.		
E2	Enable consistent and governed project scoping	Prompt Sets by BU/Service	US-12	As Pricing Operations, I want prompts to be configurable by Business Unit and service type so that differences are supported without custom builds.	Pricing Operations	Prompts can be enabled/disabled by BU/service type and mapped to assemblies; changes are governed and versioned.		
E2	Enable consistent and governed project scoping	Manual Adjustments within Guardrails	US-13	As a PDL, I want to make limited manual adjustments so that unique project nuances can be reflected without breaking governance.	Project Delivery Lead (PDL)	Manual adjustments are allowed only on designated fields and within defined thresholds; all overrides are logged and visible to approvers.		
E2	Enable consistent and governed project scoping	Out-of-Scope / Add-ons	US-14	As a PDL, I want to capture out-of-scope work or add-ons separately so that project pricing clearly distinguishes base scope from optional items.	Project Delivery Lead (PDL)	Optional items are separated from base scope; rollups show base vs optional totals; approval can require explicit acknowledgement of optional items.		
E2	Enable consistent and governed project scoping	Licensing / Non-Labor Components	US-15	As a PDL, I want to include licensing or other non-labor components when applicable so that total project economics are accurate.	Project Delivery Lead (PDL)	Where enabled by project arrangement, non-labor components can be added with governed fields; totals roll into fees and margin per workbook logic.		
E2	Enable consistent and governed project scoping	Data Validation & Completeness	US-16	As a PDL, I want the system to flag missing required inputs so that I do not submit incomplete projects for approval.	Project Delivery Lead (PDL)	Required inputs are validated before submission; system highlights missing fields and blocks submission until resolved.		
E2	Enable consistent and governed project scoping	Usability: Wizard to Grid	US-17	As a PDL, I want a guided flow from prompts to grid so that I can complete pricing efficiently.	Project Delivery Lead (PDL)	User can navigate through prompts and then proceed to the pricing grid; progress is saved and recoverable.		
E3	Produce accurate, defensible project economics with workbook parity	Pricing Grid	US-18	As a PDL, I want a pricing grid view so that I can see calculated values by entity/service and role/skill.	Project Delivery Lead (PDL)	Grid displays rows for entities/services and columns for roles/skills; cell values reflect quantities and calculated amounts derived from assemblies and prompts.		
E3	Produce accurate, defensible project economics with workbook parity	Hours Planning by Role/Skill	US-19	As Pricing Operations, I want hours planned by role/skill group so that costs and budgets calculate correctly.	Pricing Operations	Hours can be entered/adjusted at the defined role/skill level and roll up to totals by scope item, service, and project.		
E3	Produce accurate, defensible project economics with workbook parity	Standard Cost Tables	US-20	As Pricing Operations, I want standard cost tables used in calculations so that margin is consistent across projects.	Pricing Operations	Standard costs are applied to planned hours per role/skill; cost tables are governed and versioned.		
E3	Produce accurate, defensible project economics with workbook parity	Rate Tables (Standard/Contract)	US-21	As Pricing Operations, I want multiple rate tables (standard and contract) so that Business Unit rules are respected.	Pricing Operations	System supports multiple rate tables; selection/assignment follows BU rules; rate application is transparent in outputs.		
E3	Produce accurate, defensible project economics with workbook parity	Geo/Offshore Discounts	US-22	As Pricing Operations, I want geo and offshore discounts applied so that global delivery is reflected in pricing.	Pricing Operations	Discount rules apply based on role and location; discounted rates/costs are reflected in totals and scenario comparisons.		
E3	Produce accurate, defensible project economics with workbook parity	Pricing Models (Fixed Fee / T&M / Hybrid)	US-23	As a PDL, I want to apply different pricing models so that project economics match the engagement structure.	Project Delivery Lead (PDL)	Fixed fee, T&M, and hybrid models are supported; the selected model is reflected in outputs and approval criteria.		
E3	Produce accurate, defensible project economics with workbook parity	Margin Calculation Transparency	US-24	As Finance, I want margin calculated consistently and transparently so that approvals are reliable.	Finance / FP&A	Margin equals total fees minus (standard cost x hours) or the applicable workbook method; calculation components are visible to reviewers.		
E3	Produce accurate, defensible project economics with workbook parity	Effective Hourly Rate / Realization Inputs	US-25	As Finance, I want effective hourly rate and realization-related measures available where applicable so that analytics match workbook expectations.	Finance / FP&A	Where workbook logic includes EHR/realization measures, the system calculates and displays them consistently.		
E3	Produce accurate, defensible project economics with workbook parity	Service Tier Options	US-26	As a PDL, I want to model service tier options (e.g., Essential/Enhanced/Ulimate) so that clients can choose among scoped options.	Project Delivery Lead (PDL)	System supports multiple options with independent scope and pricing; options can be compared and summarized for approval.		
E3	Produce accurate, defensible project economics with workbook parity	Multi-Year / Term Modeling	US-27	As Finance, I want multi-year modeling where applicable so that renewal terms and price changes can be evaluated.	Finance / FP&A	System can store and compare year-by-year economics where workbook logic supports it.		
E3	Produce accurate, defensible project economics with workbook parity	Workday-Friendly Outputs for Hours	US-28	As Finance, I want planned hours in a Workday-friendly format so that downstream project setup and planning can use the outputs.	Finance / FP&A	Hours are structured by the required role/skill breakdown and are exportable as a schedule/budget artifact.		
E3	Produce accurate, defensible project economics with workbook parity	Parity with Existing Workbooks (All BUs)	US-29	As Finance, I want the web-based model to reproduce the pricing structures and calculation logic used in the current Excel pricing workbooks so that outcomes remain consistent during migration.	Finance / FP&A	For each BU and project arrangement, the web solution matches workbook outputs for the same inputs (tolerance/rounding rules documented).		
E3	Produce accurate, defensible project economics with workbook parity	Input/Output Traceability	US-30	As Risk / QRM, I want calculated outputs to be traceable back to inputs so that decisions are defensible.	Risk / QRM	System can show which inputs (prompts, quantities, rates, costs) drove key outputs used in approval.		
E3	Produce accurate, defensible project economics with workbook parity	Error Handling & Guardrails	US-31	As a PDL, I want the system to prevent invalid combinations of inputs so that calculations remain stable.	Project Delivery Lead (PDL)	System prevents invalid selections (e.g., incompatible arrangements), flags out-of-range entries, and provides guidance.		
E4	Support informed pricing decisions through scenarios and comparisons	What-If Scenarios	US-32	As a PDL, I want to run what-if scenarios so that I can evaluate margin and staffing tradeoffs.	Project Delivery Lead (PDL)	Users can adjust staffing mix/rates/offshore mix and see recalculated outcomes; scenarios are labeled and comparable.		
E4	Support informed pricing decisions through scenarios and comparisons	Benchmark Comparisons	US-33	As a PDL, I want benchmark comparisons so that I can understand how pricing aligns to targets.	Project Delivery Lead (PDL)	System displays target thresholds (margin/rate/hour) where available and highlights exceptions.		
E4	Support informed pricing decisions through scenarios and comparisons	Prior-Year Comparison (Renewals)	US-34	As a PDL, I want prior-year comparison for renewal projects so that I can explain changes in scope, hours, and fees.	Project Delivery Lead (PDL)	System shows PY vs current deltas for key measures and flags material changes.		
E4	Support informed pricing decisions through scenarios and comparisons	Option Comparison (Tiers)	US-35	As Practice Leadership, I want to compare options/tiered proposals so that approvals consider the right scope and economics.	Practice Area / Service Line Leadership	Approval view includes side-by-side option comparisons for fees, cost, and margin.		
E4	Support informed pricing decisions through scenarios and comparisons	Search & Select Benchmarks	US-36	As a PDL, I want to search benchmarks by client/project identifiers so that I can find comparable history efficiently.	Project Delivery Lead (PDL)	Benchmark selection supports search by client name and project identifiers where available.		
E4	Support informed pricing decisions through scenarios and comparisons	Risk/Complexity Indicators	US-37	As Practice Leadership, I want risk/complexity indicators visible so that approvals consider non-financial factors.	Practice Area / Service Line Leadership	Approval view shows risk multipliers/complexity drivers captured through prompts.		
E4	Support informed pricing decisions through scenarios and comparisons	Analytics by BU / Arrangement	US-38	As Practice Leadership, I want analytics filtered by Business Unit and project arrangement so that review focuses on relevant thresholds.	Practice Area / Service Line Leadership	Analytics views can be segmented by BU, service type, and arrangement.		
E5	Enforce timely, risk-appropriate pricing governance	Tiered Approval Routing	US-39	As Practice Area / Service Line Leadership, I want tiered approval routing so that higher-risk projects receive additional review.	Practice Area / Service Line Leadership	Routing follows margin/risk/size thresholds; routing rules can vary by BU while remaining auditable.		
E5	Enforce timely, risk-appropriate pricing governance	Approval States	US-40	As Pricing Operations, I want clear approval states so that project progress is visible and manageable.	Pricing Operations	Projects display Draft, Submitted, In Review, Approved, Rejected states with timestamps and current owner.		
E5	Enforce timely, risk-appropriate pricing governance	Reviewer Comments	US-41	As Practice Leadership, I want to provide comments and require rationale for rejection so that decisions are clear.	Practice Area / Service Line Leadership	Comments are captured per version; rejection requires a reason; comments persist in audit history.		

E5	Enforce timely, risk-appropriate pricing governance	Resubmission & Version Control	US-42	As a PDL, I want to resubmit an updated version after changes so that approvals track the correct pricing model.	Project Delivery Lead (PDL)	Resubmission creates or selects a version and routes for approval; previous decisions remain visible.
E5	Enforce timely, risk-appropriate pricing governance	Fast-Track Path	US-43	As Practice Leadership, I want a fast-track path for low-risk projects so that approvals do not impede throughput.	Practice Area / Service Line Leadership	Low-risk thresholds allow simplified approval with full audit trail.
E5	Enforce timely, risk-appropriate pricing governance	Delegation / Backup Approvers	US-44	As Practice Leadership, I want delegated approvers so that approvals continue during absences.	Practice Area / Service Line Leadership	Approver delegation is supported and logged; approvals remain attributable to the acting approver.
E5	Enforce timely, risk-appropriate pricing governance	Approval Visibility	US-45	As a PDL, I want visibility into what has been approved so that I can proceed with downstream steps confidently.	Project Delivery Lead (PDL)	PDL can view approved version, approval date, approver, and key approved economics (fees, margin).
E6	Deliver approved project pricing for downstream execution	Pricing Summary Output	US-46	As a PDL, I want a standardized pricing summary so that reviewers and stakeholders can evaluate the project quickly.	Project Delivery Lead (PDL)	Summary includes pricing model, total fees, total cost, margin, key drivers, and option/tier summary where applicable.
E6	Deliver approved project pricing for downstream execution	Export Formats	US-47	As a user, I want to export outputs to common formats so that I can share and analyze project pricing.	All Users	Users can export to Excel/CSV; exports include project identifiers, version, and approval status.
E6	Deliver approved project pricing for downstream execution	Workday Data Enablement	US-48	As Finance, I want approved pricing outputs to support Workday project setup and expected margin fields so that downstream systems have consistent data.	Finance / FP&A	Outputs include expected margin and planned hours by role in a Workday-friendly structure.
E6	Deliver approved project pricing for downstream execution	Contract/Engagement Letter Consumption	US-49	As IT, I want approved pricing outputs consumable by downstream proposal and contract/engagement letter processes and tools so that engagement setup is streamlined.	IT / Data Consumers	Approved pricing data is available in a structured format suitable for downstream consumption; only approved versions are eligible.
E6	Deliver approved project pricing for downstream execution	Resource Planning Consumption	US-50	As Resource Management, I want planned hours available so that project schedules and staffing can be informed.	Resource Management	Planned hours by role/skill are available for planning purposes and traceable to approved scope.
E6	Deliver approved project pricing for downstream execution	Renewal Output (YoY Summary)	US-51	As a PDL, I want a renewal comparison summary so that I can communicate year-over-year changes clearly.	Project Delivery Lead (PDL)	Renewal summary shows PY vs current totals and key drivers of change (scope/hours/fees).
E7	Provide transparency into pricing activity and margin outcomes	Operational Dashboards	US-52	As Practice Leadership, I want dashboards that report project pricing and approval activity so that I can manage performance and throughput.	Practice Area / Service Line Leadership	Dashboards slice by BU, service type, approver, status, and time-to-approve metrics.
E7	Provide transparency into pricing activity and margin outcomes	Actual Margin Reporting Alignment	US-53	As Finance, I want reporting that aligns planned economics to actual results so that margin performance can be monitored.	Finance / FP&A	Reports support comparing approved planned economics to actual margin reporting measures where data is available.
E8	Ensure long-term control, auditability, and scalability of pricing	Template & Catalog Governance	US-54	As Pricing Operations, I want a controlled process for updating templates, catalogs, rates, and configurations so that changes are governed.	Pricing Operations	Only authorized users can change catalogs/rates; changes are versioned, documented, and communicated before activation.
E8	Ensure long-term control, auditability, and scalability of pricing	Audit, Retention, and Security	US-55	As Risk / QRM, I want audit trail and retention controls so that decisions and data are defensible over time.	Risk / QRM	All edits, approvals, and exports are logged with timestamp/user; retention policies apply to project pricing records.
E8	Ensure long-term control, auditability, and scalability of pricing	Template & Catalog Governance	US-56	As Pricing Operations, I want to be able to produce or provide templated tools that return the same elements and possibly the same pricing and margin based on scope, so that users generating pricing do not always have to input the same information for offerings of the same or similar scope.	Pricing Operations	Templates are able to be generated based on scoping elements.
E8	Ensure long-term control, auditability, and scalability of pricing	Workday Data Enablement	US-57	As Pricing Operations, I want to be able to support Customer Grouping and relate Customer and Projects.	Project Delivery Lead (PDL)	Users are able to generate pricing based on groups of customers and projects.
E4	Support informed pricing decisions through scenarios and comparisons	Cost Plus Pricing	US-58	As a PDL, I want to be able to incorporate resourcing assumptions and cost plus methodologies into my pricing strategy.	Project Delivery Lead (PDL)	The system allows a PDL to define staffing roles, rates, utilization assumptions, and markups and automatically calculate cost-plus pricing based on those inputs.
E4	Support informed pricing decisions through scenarios and comparisons	Pricing Strategy Flexibility	US-59	As a PDL, I want to be able to model value or fixed fee pricing options.	Project Delivery Lead (PDL)	The system enables a PDL to model value-based and fixed-fee pricing scenarios that produce a total price independent of underlying cost calculations.
E4	Support informed pricing decisions through scenarios and comparisons	Bundled Pricing	US-60	As a PDL, I want to be able to model bundled pricing.	Project Delivery Lead (PDL)	The system allows a PDL to bundle multiple products and/or services into a single priced offering while retaining component-level detail.
E4	Support informed pricing decisions through scenarios and comparisons	Multi-Service Pricing	US-61	As a PDL, I want to be able to consolidate multiple templates to provide combined pricing from multiple products and services.	Project Delivery Lead (PDL)	The system enables a PDL to combine multiple pricing templates into a single consolidated pricing view across products and services.
E6	Deliver approved project pricing for downstream execution	Customer Data Management	US-63	As Growth Enablement, I want integration with microsoft dynamics CRM so that data on business relationships is consistent with pricing and contracting communications with customers.	Growth Enablement	The system integrates bi-directionally with Microsoft Dynamics CRM to synchronize customer, account, and opportunity data used in pricing and contracting.
E4	Support informed pricing decisions through scenarios and comparisons	Integration with Budgeting Process	US-64	As a Practice Area leader, I want to be able to integrate data with my budgeting and forecasting tool (i.e., Workday Adaptive) so that I can align key business metrics.	Practice Area / Service Line Leadership	The system integrates with Workday Adaptive (or similar budgeting tool) to export pricing, revenue, and margin data for use in budgeting and forecasting.
E5	Enforce timely, risk-appropriate pricing governance	Renewals Tracking and Management	US-65	As Practice Area leadership, I want the ability to integrate with firm PowerBI dashboarding for renewal tracking and management.	Practice Area / Service Line Leadership	The system provides data feeds consumable by Power BI to support renewal tracking, reporting, and management dashboards.
E5	Enforce timely, risk-appropriate pricing governance	Configurable Approvals	US-66	As Practice Area leadership, I want the ability to configure renewal approvals based on margin requirements and pricing exceptions (admin fee, time and material, US only resources).	Practice Area / Service Line Leadership	The system allows configurable renewal approval workflows triggered by margin thresholds and defined pricing exceptions.
E4	Support informed pricing decisions through scenarios and comparisons	Benchmarks/guidance	US-67	As Finance, I want the tool to assist in creating targets based on stratified inputs (practice, industry, GEO, etc.)	Finance / FP&A	The system allows Finance users to define pricing and performance targets using stratified inputs such as practice area, industry, and geographic region.
E4	Support informed pricing decisions through scenarios and comparisons	Fee Structure Modeling	US-68	As a PDL, I want to have the option to model fee structure options based on specific hours, a multiple of first months fees, or other.	Project Delivery Lead (PDL)	The system enables a PDL to model alternative fee structures based on defined hours, multiples of initial monthly fees, or other configurable calculations.
E4	Support informed pricing decisions through scenarios and comparisons	Granular Rate Tables	US-69	As Pricing Operations, I want to be able to provide more granular rate tables if desired.	Pricing Operations	The system allows Pricing Operations to configure and apply detailed rate tables at a granular level (e.g., role, geography, or experience) when required.
