

DealPad

Pricing & Scoping 2.0

ARMANINO LLP · NEXTGENAPP

Demo Driver

End-to-end stakeholder walkthrough

What this document covers

A scripted, click-by-click run through every major DealPad surface — with the exact data to enter, the catalog and configuration that gets consulted at each step, the talking points to make, and what the audience should see on screen. Use it as a presenter's notes for live demos, a self-paced trial for new users, or as a reference for the 4-week production pilot.

Two flows are demonstrated

- Flow A — Manual wizard: opportunity -> 7 wizard steps -> submit -> approve -> analytics
- Flow B — Autonomous Agent: opportunity -> 1-click -> reviewer approves draft

Date

April 2026

Audience

Pilot stakeholders

Duration

~30 minutes

Agenda

A 30-minute live demo. Flow A and Flow B can run independently — pick one for shorter sessions.

#	Section	Time	Persona
0	Pre-demo checklist & login	2 min	Presenter
1	Persona switcher · role-based UI	2 min	Switch through 6
2	Dashboard · pipeline at a glance	2 min	Michael Torres (PDL)
3	Dynamics CRM · opportunities to import	3 min	Michael Torres (PDL)
A	Flow A — Manual wizard (7 steps)	10 min	Michael Torres (PDL)
A.8	Submit · Intapp + Workday gates · approval	3 min	Marcus Chen -> Jennifer Walsh
B	Flow B — Autonomous Agent (1 click)	5 min	Michael Torres (PDL)
4	Analytics · margin & cycle KPIs	2 min	Jennifer Walsh (FIN)
5	Architecture Hub · DDD · integrations	3 min	IT Administrator
6	Q&A	open	All

Pre-demo checklist

- App is published — open in a fresh browser window (no cached login state).
- Database is seeded — verify by hitting /clients showing 3+ clients and /dynamics showing 3+ open opportunities.
- Backend Server and DealPad Frontend workflows both green.
- If demoing the Autonomous Agent, ensure at least one Dynamics opportunity is in stage Develop or Propose AND not yet linked to a deal.
- Have a backup tab open at /architecture for the architecture portion in case CRM data is shared.

1 · Persona switcher

Demonstrates role-based access. Sets the tone that DealPad is one platform serving six personas, each with their own surface.

Action

- On the login screen, click each persona card in turn (do not log in yet).
- Point out the role badge color and one-line responsibility under each name.
- Log in as Michael Torres (PDL) — this is the primary persona for the demo.

Personas in the seed

Persona	Role	What they care about
Michael Torres	PDL — Practice Delivery Lead	End-to-end deal scoping, pricing, delivery hand-off
Rachel Kim	SLL — Service Line Lead	Service-line quality, staffing model, methodology fit
Pricing Operations	PO — Pricing Ops	Rate cards, scope catalog, prompt sets, global config
Jennifer Walsh	FIN — Finance / Practice Director	Margin enforcement, approval thresholds, sign-off
Marcus Chen	QRM — Quality & Risk Management	Independence checks, conflict screening, mitigations
IT Administrator	IT — System Admin	Integration health, RBAC, platform observability

TALKING POINT

Today's Excel workbook is a single sheet shared by everyone. DealPad gives each persona a tailored surface but a single source of truth. The same deal record drives all six views.

2 · Dashboard

First screen Michael lands on. Establishes that DealPad already knows the state of his pipeline before he does anything.

Action

- Click the Dashboard tab in the left nav.
- Walk the four KPI tiles across the top.
- Hover the trend chart to show monthly pipeline value.
- Scroll down to 'Deals needing your attention' and point out the badges (At Risk · Blocked · Pending Approval).

KPIs displayed

KPI	Source	Why it matters
Total Pipeline (\$)	Sum of fee on deals not in Won/Lost	Top-of-funnel health
Win Rate (%)	Won / (Won + Lost) over trailing 90d	Conversion quality
Avg Margin (%)	Mean of deal margin across active deals	Commercial discipline
Avg Cycle Time (days)	Days from draft -> submitted -> approved	Process efficiency

Charts

- Monthly Trend (line) — pipeline value rolled by month.
- Pipeline by Status (bar) — draft / pending review / submitted / approved counts.
- Margin Distribution (horizontal bar) — buckets at <20%, 20–30%, 30–40%, 40%+.
- Complexity Mix (pie) — Low / Medium / High / Very High.

TALKING POINT

Today these numbers exist in three different spreadsheets and a Power BI report no one trusts.
Here it's one number, computed live from the system of record.

3 · Dynamics CRM — opportunities

This is where deals start. We surface live opportunities from D365 directly inside DealPad so the PDL never tab-switches.

Action

- Click 'Dynamics CRM' in the left nav.
- Point out the bidirectional sync banner at the top (last sync timestamp).
- Walk the columns: Opportunity · Account · Stage · Est. Value · DealPad Status · Actions.
- Pick the Helios Energy opportunity (stage = Develop) for the manual flow.

Sample opportunities in the seed

Opportunity	Account	Stage	Est. Value
Pacific Logistics Co — Tax Provision Outsourcing	Pacific Logistics Co	Qualify	\$285,000
Helios Energy Inc — SOX Readiness	Helios Energy Inc	Develop	\$540,000
Crestwood Holdings — 2026 Annual Audit	Crestwood Holdings	Qualify	\$412,000

CONFIG CONSULTED

D365 connection settings · stage mapping (Qualify/Develop/Propose/Close)
Account -> Client resolution rules (auto-create stub if no match)
Eligibility for Autonomous Agent: stage in {Develop, Propose} AND no existing dealpadDealId

TALKING POINT

Every action here writes back to D365 — the salesperson sees the DealPad ID on their opportunity record within 2 seconds. No more 'who's working on what?' meetings.

FLOW A

Manual wizard

PDL walks the deal through 7 wizard steps, then submits for approval

Use the Helios Energy opportunity from the previous step. From the CRM page, click 'Import to DealPad' on its row. The system creates a draft deal at currentStep=1 and redirects to the wizard.

A.1

Setup

as Michael Torres (PDL)

Data to enter

Field	Value to enter	Notes
Deal Title	Helios Energy — SOX Readiness FY26	Auto-prefilled from opportunity
Type	New	Renewal / New / Change Order
Business Unit	Risk Assurance & Advisory	Drives catalog filtering
Service Line	SOX & Internal Controls	Drives prompt set selection
Complexity	Medium	Initial guess — refined in Step 3
Start Date	Today + 14 days	Defaults to today; editable
PDL Owner	Michael Torres	Pre-filled from logged-in user

CATALOG & CONFIG CONSULTED

Business Unit & Service Line taxonomy (loaded from system_config)

AI Deal Similarity (UC-1): suggests comparable past deals and their outcomes in a side panel

TALKING POINT

This screen replaces the first three tabs of the Excel workbook. Notice we never ask for hours or fees yet — those are derived later from scope and rate cards, not guessed up front.

A.2

Scope

as Michael Torres (PDL)

Data to enter

- Click 'Browse Catalog' — filter by BU 'Risk Assurance & Advisory'.
- Add: 'SOX Scoping & Risk Assessment' (qty 1)
- Add: 'Process Walkthroughs' (qty 8 — one per significant process)
- Add: 'Control Testing — Operating Effectiveness' (qty 1)
- Add: 'Deficiency Evaluation & Reporting' (qty 1)
- Or apply the template 'SOX Readiness — Mid-Market' to insert all 4 at once.

Catalog rows that show up (filtered for this BU)

Code	Name	Default hours	Service Line
SOX-001	SOX Scoping & Risk Assessment	120	SOX & Internal Controls
SOX-002	Process Walkthroughs (per process)	24	SOX & Internal Controls
SOX-003	Control Testing — Operating Effectiveness	200	SOX & Internal Controls
SOX-004	Deficiency Evaluation & Reporting	60	SOX & Internal Controls

CATALOG & CONFIG CONSULTED

scope_catalog table (filtered by BU + serviceLine)

scope_templates table (curated bundles — 'SOX Readiness — Mid-Market' template)

AI Effort Estimation (UC-2): adjusts default hours based on complexity drivers (refined in Step 3)

A.3 Assumptions / Complexity drivers

as Michael Torres (PDL)

Data to enter

Prompt	Answer	Multiplier
How many geographic regions are involved?	2 regions	1.10×
Are there regulatory/compliance requirements?	SOX/HIPAA	1.20×
What is the expected data volume?	Large	1.15×
How many integrations are required?	3–4	1.10×
Is this client first-time SOX?	Yes	1.25×

CATALOG & CONFIG CONSULTED

prompt_sets · prompt_set_items (active prompt set for the service line)

AI Complexity Multipliers: each answer carries a multiplier that compounds into the final effort estimate

Per-prompt 'rationale' is captured in prompt_responses for audit

TALKING POINT

Each answer here directly moves hours and fees in real time. Watch the running total at the top of the page. Today this lives in a hidden Excel sheet that only Pricing Ops can edit.

A.4 Pricing & Team

as Michael Torres (PDL)

Data to enter

- Default rate card 'FY2026 Standard' is auto-applied.
- Confirm role mix: Partner 5%, Senior Manager 15%, Manager 25%, Senior 30%, Consultant 25%.
- Override Senior Manager rate if needed (this is a friendly client — discount \$20/hr).

Rate card — FY2026 Standard

Role	Bill rate	Cost rate	Default mix
Partner	\$550/hr	\$275/hr	5%
Senior Manager	\$395/hr	\$195/hr	15%
Manager	\$310/hr	\$155/hr	25%
Senior	\$245/hr	\$120/hr	30%
Consultant	\$225/hr	\$110/hr	25%

CATALOG & CONFIG CONSULTED

rate_cards · rate_card_lines (active card filtered by effective date)
Pricing Engine: recalc(fee, cost, hours, margin) on every edit
AI Margin Advisor (UC-3): warns inline if margin drops below the service-line floor

A.5 Review · pre-flight gates

as Michael Torres -> Marcus Chen

Action

- Click 'Run Independence Screening' — calls Intapp.
- Click 'Validate Cost Center' — calls Workday.
- Resolve any warnings (e.g., 'Affiliated party detected — add mitigation').

What gets checked

Check	External system	Pass criteria
Independence screening	Intapp Risk	No conflicts · or mitigations attached
Cost center & budget headroom	Workday	Cost center exists · budget headroom > deal cost
Margin floor	DealPad config	Margin >= service-line floor (default 25%)

TALKING POINT

These two gates are the same ones the manual approval process runs today — just earlier and automated. We catch issues before the deal is shaped, not after the engagement letter is drafted.

A.6 Approval

as Jennifer Walsh (FIN)

Approval routing rules

Condition	Approver
Margin >= 35% AND Fee <= \$500K AND scope items < 8	Auto-approved
Margin 25–34% OR Fee \$500K–\$2M	Practice Delivery Lead (peer)

Condition	Approver
Margin 20–24% OR Fee \$2M–\$5M	Service Line Lead
Margin < 20% OR Fee > \$5M OR strategic flag	Practice Director (Finance)

Action

- Switch persona to Jennifer Walsh (FIN).
- Open Approvals queue from left nav — the Helios deal appears at the top.
- Read the AI Risk Summary (UC-5): margin posture, complexity, screening hits, recommendation.
- Click 'Approve' (or 'Request Changes' to demo the loop).

CATALOG & CONFIG CONSULTED

approval_policies (margin & fee thresholds per BU)

AI Risk Summary (UC-5): synthesizes deal context into a 3-paragraph narrative + risk score 0–100

A.7

Summary & engagement letter

as Michael Torres (PDL)

Action

- Switch back to Michael Torres.
- Open the deal — status is now 'Approved'.
- Click 'Generate Engagement Letter' — calls Conga with the deal data.
- Show the generated EL preview (catalog scope, fees, team, assumptions all populated).

CATALOG & CONFIG CONSULTED

Conga templates (per service line)

Field mapping: deal -> EL placeholders (covers 47 fields end-to-end)

TALKING POINT

From opportunity to ready-to-send engagement letter in under 20 minutes — today this takes a PDL between 2 and 5 days, with hand-offs to Pricing Ops and a partner review meeting.

FLOW B

Autonomous Agent

Same outcome as Flow A — but in 1 click and ~5 seconds

Use the Crestwood Holdings opportunity (or any other Develop/Propose-stage opp not yet linked). Setup time required: zero.

B.1 Trigger the agent

as Michael Torres (PDL)

Action

- Go to Dynamics CRM page.
- On the Crestwood row, click the purple 'Autonomous Agent' button.
- Watch the progress modal: Setup -> Prompts -> Scope -> Pricing -> Scenarios -> Risk -> Review (~3–8 sec).
- Land on the deal Summary page with status 'Pending Reviewer Approval (Agent Draft)'.

CATALOG & CONFIG CONSULTED

All of the same: scope_catalog, prompt_sets, rate_cards, approval_policies

Plus: pickTemplateForName() heuristic that maps opportunity name -> BU/serviceLine/complexity

Plus: pickContextualAnswer() per prompt — emits answer + multiplier + confidence + needsReview + rationale

B.2 Review the agent's draft

as Michael Torres (PDL)

What's on the deal page

- Status banner: 'Agent-Drafted Deal — pending your approval' (purple)
- Agent Run Details panel: 7 steps with per-step confidence score, summary, and any 'needs review' flags
- Full deal record populated: scope items · prompt responses · pricing lines · scenarios · risk narrative
- Three buttons in the banner: Approve & Submit · Open in Wizard · Discard Draft

B.3 Three reviewer outcomes

as Michael Torres (PDL)

Choose one to demo

Outcome	What it does	When to use
Approve & Submit	Runs Intapp + Workday gates · creates approval · sets status=submitted	Agent draft looks good · trust the run
Open in Wizard	Snapshots draft to audit log · sets currentStep=1 · lets PDL edit any step	Need to tweak scope or pricing
Discard Draft	Archives deal · unlinks D365 opportunity · frees it for re-scoping	Agent got it wrong · start over

TALKING POINT

The agent never bypasses approval gates. Same Intapp + Workday checks run at agent-approve as run at manual submit. The agent compresses the work, not the controls.

4 · Analytics

Where Jennifer (Finance) and Service Line Leads spend their time. Live data from the same system of record — no spreadsheet exports.

Action

- Switch to Jennifer Walsh (FIN).
- Click 'Analytics' in the left nav.
- Walk the four KPIs at the top, then the four charts.
- Click into the Margin Distribution bar to drill down to the deals in that bucket.

Charts on the page

Chart	Type	Filterable by
Monthly trend	Line	BU · service line · date range
Pipeline by status	Bar	BU · stage
Margin distribution	Horizontal bar	BU · service line
Complexity mix	Pie	BU

TALKING POINT

Today this report is a Tuesday-morning ritual: extract from CRM, paste into Excel, run macros, email PDF. Here it's always live, drill-down is one click, and the underlying deal is one more click away.

5 · Architecture Hub

Quick technical credibility tour for IT-leaning stakeholders. Skip if audience is purely commercial.

Action

- Switch to IT Administrator persona.
- Click 'Architecture' in the left nav.
- Walk the 6 tabs in order: Overview · Interactive Diagram · DDD Context · Integrations · Chat · Document.
- On the DDD Context tab, scroll to the two sequence diagrams (Autonomous Agent + Manual Wizard) and the comparison table.
- On the Integrations tab, point out the four bi-directional connections: D365 · Workday · Intapp · Conga.
- On the Chat tab, ask 'What approval thresholds apply to Risk Assurance deals?' to demo the architecture-aware Q&A.

9 bounded contexts

- Identity & Access · Client & Opportunity · Deal Lifecycle · Scope & Catalog · Pricing & Rate Cards
- Approval & Risk · External Integrations · AI Orchestration · Analytics & Reporting

TALKING POINT

The whole system is built around explicit bounded contexts. That's why the Autonomous Agent could be added in a sprint — it's a new orchestrator over the same context boundaries, not a parallel rewrite.

Appendix · Reference data

Quick lookup tables for anything you get asked during the demo.

A · Approval policy thresholds (default seed)

Tier	Margin	Fee	Approver
Auto	>= 35%	<= \$500K	System (no human approval)
Tier 1	25–34%	<= \$2M	PDL (peer review)
Tier 2	20–24%	\$2M–\$5M	Service Line Lead
Tier 3	< 20% or strategic	Any	Practice Director (Finance)

B · Scenario engine output (Crestwood example)

Scenario	Fee	Hours	Margin	Picked
Conservative (senior-heavy)	\$495,000	1,100	30.0%	—
Standard (balanced)	\$425,000	1,200	27.0%	* Recommended
Aggressive (cost-optimized)	\$365,000	1,400	30.0%	—

C · AI use cases (5 of them)

Code	Name	Where it shows up
UC-1	Deal Similarity	Step 1 (Setup) — comparable deals panel
UC-2	Effort Estimation	Step 2 (Scope) — adjusts default hours
UC-3	Margin Advisor	Step 4 (Pricing) — inline margin warnings
UC-4	Scenario Recommendation	Step 5 (Review) — three scenarios + recommended
UC-5	Risk Summary	Step 6 (Approval) — narrative + risk score

D · Demo recovery — what to do if something breaks

- If a wizard step won't save: refresh the page; the partial state is persisted on every change.
- If Dynamics import fails: reseed by hitting POST /api/admin/reseed-dynamics.
- If the Autonomous Agent button is greyed out: opportunity is either not in Develop/Propose stage, or already linked. Switch to a different opp.
- If approvals queue is empty for FIN: confirm at least one deal has been submitted (status=submitted, not draft).
- Last resort: use the second pre-prepared seeded deal (Pacific Logistics) as a fallback walkthrough.

E · One-line elevator pitch for each stakeholder type

Audience	What to lead with
CFO / Finance	Margin discipline enforced at deal entry, not in the rear-view mirror.
Practice Director	PDL cycle time drops from days to under an hour. EL ready before the kickoff call.
Service Line Lead	Catalog + prompt sets capture your methodology — every deal in your service line is consistent.
IT / Architecture	Bounded-context architecture, four bi-directional integrations, full audit trail per action.
End user (PDL)	One screen instead of seven tabs. Numbers live as you type.

Appendix F · ISO/IEC 42001 readiness map

ISO/IEC 42001:2023 is the international management-system standard for Artificial Intelligence — the 'ISO 27001 of AI'. It is becoming the de-facto compliance answer for the EU AI Act, NIST AI RMF, and enterprise AI procurement. This map shows where DealPad already lines up with the standard and where additional work would be needed for certification.

Status legend

- MET — implemented today and demonstrable in the live app.
- PARTIAL — foundation is there; needs documentation, formal sign-off, or minor extension.
- GAP — not in scope for the PoC; would be added during a certification programme.

Mapping by ISO 42001 clause / Annex A control

Clause / Control	DealPad evidence	Status
4 · Context of the organization	AI scope explicitly bounded to deal pricing and scoping. Stakeholders identified across 6 personas.	MET
5 · Leadership · AI policy	Architecture Hub captures 4 AI strategy principles. No formal board-approved AI policy document yet.	PARTIAL
6.1 · Risk & opportunity (AI-specific)	Per-prompt 'needsReview' flags + confidence scores capture AI uncertainty at runtime. Formal AI risk register is not yet maintained.	PARTIAL
A.5 · AI system impact assessment	UC-5 Risk Summary produces a deal-level narrative + risk score. Org-wide AI Impact Assessment template not yet authored.	PARTIAL
A.6.2 · AI system life cycle (objectives, design, V&V)	5 documented use cases (UC-1..UC-5) with intended use, inputs, outputs. Each AI call is logged in activity_log with model + prompt context.	MET
A.6.2.6 · Verification & validation	Manual wizard exists as the ground-truth comparator for the Autonomous Agent. Confidence + needsReview surface low-quality outputs to a human.	MET
A.6.2.8 · AI system deployment	Versioned releases via Replit deployments. Rollback supported via checkpoints. Production smoke tests run on publish.	MET
A.7 · Data for AI systems	Training data: none — DealPad uses retrieval-augmented prompting on the customer's own catalog/config, not a fine-tuned model. Data lineage is captured by activity_log per action.	MET
A.8 · Information for interested parties	Every agent-generated field carries a 'rationale' string visible to the reviewer. Status banner makes clear when output is AI-drafted vs human-edited.	MET
A.9 · Use of AI systems	Reviewer always has 3 outcomes (Approve · Open in Wizard · Discard). Approval gates (Intapp, Workday, margin floor) are non-bypassable and apply equally to AI and manual flows.	MET
A.9.3 · Human oversight	PDL approves every agent draft before submission. FIN approves every deal above auto-approval thresholds. Approval queue is the official record.	MET
A.10 · Third-party relationships	External integrations (D365, Workday, Intapp, Conga) are explicitly bounded contexts. AI model provider (LLM API) usage is logged. Vendor due-diligence package not yet formalised.	PARTIAL

Clause / Control	DealPad evidence	Status
9 · Performance evaluation	Analytics dashboard tracks pipeline, margin, cycle time. AI-specific metrics (acceptance rate, override rate, confidence distribution) not yet surfaced.	PARTIAL
10 · Improvement · incident management	activity_log captures every AI run + override. Formal AI incident triage process and post-mortem template not yet defined.	GAP
7.2 · Competence (AI literacy)	Training material for PDLs on interpreting confidence scores and override patterns not yet authored.	GAP

Summary

Status	Count	Implication
MET	7 controls	Defensible today in a buyer due-diligence questionnaire.
PARTIAL	5 controls	Documentation + governance artefacts close the gap in 4–6 weeks.
GAP	2 controls	Process work (incident mgmt, training) — not a code change.

TALKING POINT

DealPad was not designed against ISO 42001 — but the bounded-context architecture, per-action audit trail, and human-in-the-loop reviewer model align with most of the standard's controls by default. A 6-week governance workstream alongside the production pilot would put Armanino in a strong position to be one of the first professional-services firms with an ISO 42001-certified AI platform.

WHAT CHANGES IN THE PRODUCT IF ARMANINO PURSUES CERTIFICATION

Add an 'AI Governance' tab to the Architecture Hub: policy, risk register, impact assessments.
Add AI-specific KPIs to Analytics: agent acceptance rate, override rate by step, confidence drift.
Add an 'AI incident' record type linked to deals, with a triage workflow.
Publish a vendor security & AI fact-sheet for the underlying LLM provider.
